

E-RECHNUNG · OHNE UPLOAD

Beleggo

Validate, fix and create
compliant EU e-invoices —
entirely on your device. No
cloud. No account. No data
leaves your machine.

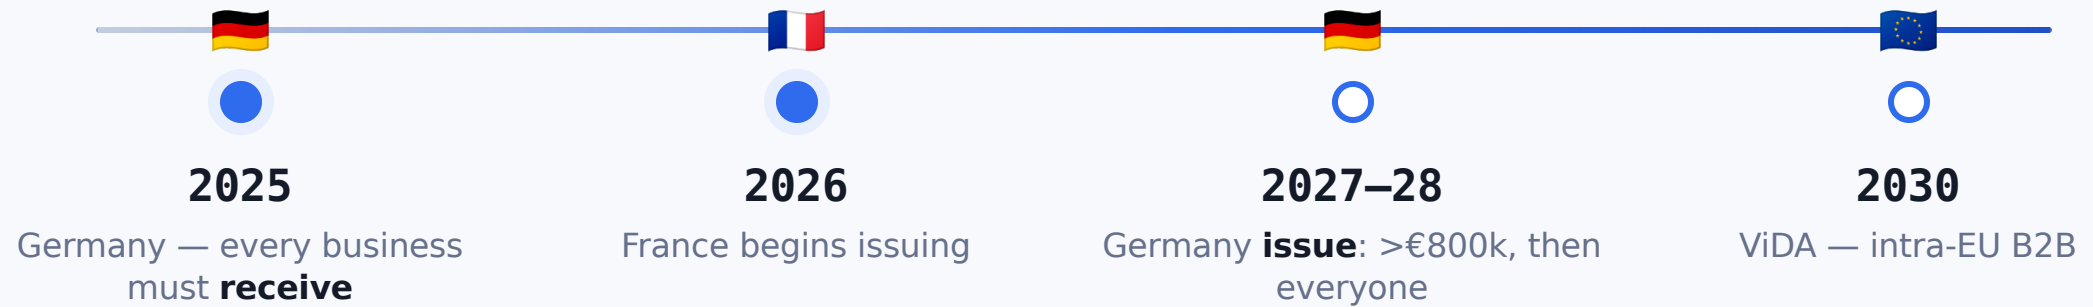

■ **Beleggo** · beleggo.de

THE NEW REALITY

E-invoicing is now mandatory. Getting it **wrong** is expensive.

One malformed field and your invoice is silently rejected. Beleggo catches it before you send — locally.

The mandate is here — and it keeps expanding

Whether you're a freelancer, an SME, a tax practice or a software vendor — this lands on your desk.

Three things you do with Beleggo

01 · VALIDATE

Know in seconds

Drag in an XRechnung, ZUGFeRD or Peppol file → a clear verdict, every error mapped to the exact field, in plain language.

02 · FIX

Repair it

One click fixes safe technical defects. A guided editor handles the rest. Invalid → valid, no developer.

03 · CREATE

Make a valid one

Fill a simple form → a valid XRechnung or ZUGFeRD/Factur-X PDF, checked before you download it.

THE DIFFERENCE THAT MATTERS

no upload

Everything runs in your browser, on your desktop, or in your terminal. Your invoices never touch our servers.

Don't trust the label — pull the cable. Beleggo keeps working offline.

Validation that goes deeper — 5 layers

LAYER 1

Schema (XSD)

The file is structurally well-formed.

LAYER 2

EN 16931 + XRechnung

1,749 business rules — matched to the official verdict.

LAYER 3

PDF/A-3 container

The ZUGFeRD shell a strict router can reject.

LAYER 4

Page ↔ XML

The visible PDF and the embedded data actually agree.

LAYER 5

B2G preflight

"Will this pass for a public authority?" + Leitweg-ID.

WHY IT MATTERS

Most check only the XML

Beleggo checks the container and the human-readable page too.

Click an error → see the field

Every issue points at the box it's about. Click **BT-10 missing** and the field lights up in the readable invoice view — no reading XPath, no guessing which input is wrong.

Each error links to its own page in the **1,749-rule library**: what it means, where it applies, how to fix it. Bilingual, searchable.

EVERY ISSUE IS CLASSIFIED

auto-fixable

one click

needs input

guided editor

manual

we tell you exactly what

One tool, every European format

SYNTAXES

UBL · CII · ZUGFeRD

Including the hybrid Factur-X PDF. Convert freely between them — validated after every conversion.

STANDARDS

EN 16931 · XRechnung · Peppol BIS 3

The European core and the German & pan-EU profiles.

NATIONAL CIUS

XRechnung, NLCIUS, CIUS-RO, HR-CIUS, CIUS-PT — one engine, eight formats.

LANGUAGES

Deutsch · English · Français

Invoices generate in the seller's language; the binding XML is identical.

Wherever you work

 WEB STUDIO

Nothing to install

Offline-capable (PWA). Free forever.

 DESKTOP APP

mac · Windows · Linux

Batch-validate a whole folder, watch an inbox, native drag-drop. This is Pro.

 COMMAND LINE

In your CI

`beleggo validate / fix / generate` — one binary, no JVM.

 AI AGENT (MCP)

Let the AI check it

A local server so Claude or any AI validates & fixes invoices — without uploading them.

Built for people who take data seriously

PRIVACY

No account. No cloud. No analytics.

No sign-up, no tracking script, no server that ever sees your invoice.

COMPLIANCE

GoBD-friendly by architecture

Processing is local — no data-processing agreement to sign, no sub-processor to vet.

TRUST

Proven against the officials

Verdicts cross-checked with the KoSIT jar, Service-BW, the EU ITB and VeraPDF — 13/13 agree.

HONESTY

Clear about what ships

Every capability carries a status badge: Available · In development · On request.

Pay once. No subscription trap.

FREE · FOREVER

€0

Web studio · CLI · MCP server. Validate & create, no limits on the essentials.

PRO · ONE TIME

€99

Desktop batch & watch · PDF branding + payment QR · unlimited saved invoices · **12 months of rule updates included.**

Rule updates after year one: €29/yr — the legislator provides the upgrade cycle, so your validator never quietly goes stale.

For teams and builders too

TAX PRACTICES

Kanzlei edition

Batch-validate a whole Mandanten folder, letterhead reports, multi-seat — client invoices never leave the Kanzlei.

ERP & SOFTWARE

Embed the engine

npm / WASM / binary, so your product validates without sending customer invoices to anyone.

QA TEAMS

Prove it's right

A 208-sample data kit + a cross-validator conformance report.

PARTNERS

White-label it

Ship the whole studio under your own brand.

FREE · NO UPLOAD · NO ACCOUNT

Drop in an invoice and get a verdict in seconds.

If it's broken, we'll show you exactly where.
